

Amendments to the Claims:

This listing of claims will replace all prior versions, and listings, of claims in the application:

Listing of Claims:

Claim 1 (currently amended): A container for a specimen vial, comprising:

- a first internal compartment for holding the vial;
- a second internal compartment;
- a first window for viewing the first internal compartment; and
- a second window for viewing the second internal compartment.

Claim 2 (currently amended): The container ~~method~~ of claim 1, further comprising:

- an internal ledge for separating the first internal compartment from the second internal compartment.

Claim 3 (currently amended): A collection package for a vial, comprising:

- a top;
- a first side, connected to the top;
- a bottom, connected to the first side;
- a second side, connected to the bottom; and
- an internal separator for holding the vial.

Claim 4 (currently amended): The package of claim 3, wherein the internal separator forms a first compartment and a second compartment, further comprising:

a window for viewing the vial held in the first compartment.

Claim 5 (currently amended): The package of claim 4, further comprising:

a second window for viewing the second compartment and not the first
compartment.

Claim 6 (currently amended): A collection package, comprising:

a top;

a first side, connected to the top;

a bottom, connected to the first side;

a second side, connected to the bottom; and

an internal separator;

wherein the internal separator forms a first compartment and a second
compartment, further comprising:

a window for viewing the first compartment; and

a second window for viewing the second compartment;

~~The package of claim 5,~~ wherein the top, the first side, the bottom, the second side, and
the internal separator are all formed by folding of a planar sheet.

Claim 7 (currently amended): A method of forming a container, comprising the steps of:

folding a sheet to form a first side;

folding the sheet to form a top;

folding the sheet to form a second side;

folding the sheet to form a bottom; ~~and~~
folding the sheet to form an internal separator; and
folding the sheet to form a retainer within the container.

Claim 8 (currently amended): A method of forming a container, comprising the steps of:

folding a sheet to form a first side;

folding the sheet to form a top;

folding the sheet to form a second side;

folding the sheet to form a bottom;

folding the sheet to form an internal separator;

~~The method of claim 7, further comprising the steps of:~~

forming a first window in the top; and

forming a second window in the bottom.

Claim 9 (currently amended): A method of containing a specimen, comprising the steps of:

forming a container having a first internal compartment for retaining the specimen
and a second internal compartment;

forming a first window in the container for viewing the first internal
compartment; and

forming a second window in the container for viewing the second internal
compartment.

Claim 10 (currently amended): The method of claim 9, further comprising the steps of:

locating the a specimen in the first internal compartment for retention in the first internal compartment; and

locating a label in the second internal compartment.

Claim 11 (currently amended): A system, comprising:

a fillable container;

a separator contained internally within the fillable container;

a retainer contained internally within the fillable container;

wherein a first window and a second window of the fillable container allow viewing of respective contents of the fillable container on either side of the separator within the container.

Claim 12 (new): The container of claim 2, further comprising:

a vial tray internally connected to the container, for retaining the vial.
